

Designed and built in North America on the same award-winning platform as our extraordinarily successful AVM 20, the new AVM 30 uses the same advanced operating system and incorporates the following design changes and improvements:

- **4 Component Video** Inputs
- **2 Component Video** Outputs
- **Blue Vacuum-Fluorescent** front-panel display
- **Blue and Red LEDs**
- **Dolby® Pro Logic IIx** will be available as a free, easy on-line software upgrade on our website.
- **Faster Microprocessor** – more than double the clock speed provides significantly faster response from the AVM 30's front-panel controls, as well as from its remote control.
- **1-Mbit Memory** on the motherboard provides double the memory which is used to store code for the DSP, providing added flexibility for future software upgrades.
- **Finer-Grain** brushed aluminum front panel
- **Optional Rack-Mount Handles** will be available
